★ NISM–Series XV Certified Research Analyst · SEBI · Reg: NISM–202500234524 ★

PROFILE

MTech CS engineer with a deep passion for Indian capital markets. Cleared the SEBI mandated NISM Series XV Research Analyst examination. Combines strong Python and ML engineering with institutional quality equity research and quantitative strategy design skills.

EDUCATION

M.Tech in Computer Science and Engineering

DAIICT, Gandhinagar
2024 to 2026 | Final Semester

B.E in Computer Engineering

Gujarat Technological University
2020 to 2024 | CGPA 7.85 / 10

TECHNICAL SKILLS

Languages: Python, SQL, JavaScript

Quant Tools: Backtrader, Backtesting.py, QuantStats

Finance: DCF, WACC, EV/EBITDA, Scenario Analysis

Data Science: Pandas, NumPy, Matplotlib, Scikit-learn

ML and AI: Supervised Learning, Time Series, Multi-Agent

Platforms: TradingView, Screener.in, Jupyter, Git

Office Tools: Excel Financial Models, PowerPoint

MARKET KNOWLEDGE

Equity Research · Technical Analysis · Fundamental Analysis · Chart Patterns · Sector Analysis · SEBI Regulations · Capital Markets Structure

KEY NUMBERS

CERTIFICATION

NISM–Series XV ✓ **SEBI Certified**

National Institute of Securities Markets

Score: **66.75 / 100**

Valid till December 2028

EQUITY RESEARCH AND REPORTS

Independent Equity Research Analyst · Self Initiated Research

Jan 2024 to Present

Full coverage equity research on NSE listed companies. Reports span fundamental analysis, DCF valuation, peer comparison and conviction buy or sell recommendations for Indian capital market investors.

- Authored a complete equity research report on Siemens India Ltd covering four business segments including energy, mobility, smart infrastructure and digital industries. Report analysed revenue breakdown, EBITDA margins, ROCE, working capital cycle and debt structure across five years of financials.
- Issued a Hold and Reduce recommendation backed by stretched valuations relative to near term earnings visibility. Benchmarked against ABB India and Honeywell Automation using EV to EBITDA and P to E peer multiples.
- Supported the fundamental recommendation with technical analysis covering key resistance zones, moving average confluence across 21, 50, 100 and 200 DMA and RSI momentum readings to present a complete buy or sell picture for both retail and institutional readers.
- Built a complete DCF valuation model in Excel covering five year revenue projections, EBITDA margin assumptions, WACC calculation, terminal value estimation and a three scenario sensitivity analysis across bull, base and bear cases.

QUANTITATIVE FINANCE PROJECTS

Alpha Portfolio vs Nifty 50 · Quantitative Research Project

- Constructed a structured three stock equal weight portfolio comprising Tata Power, CG Power and Sun Pharma through fundamental stock selection research and benchmarked it against Nifty 50 over five years.
- Portfolio returned +312% total versus Nifty 50 return of +97% over the identical period. Achieved a Sharpe ratio of 1.84, Sortino ratio of 2.47, Calmar ratio of 0.86 and an annualised Jensen's Alpha of +18.2%.
- Analysed 25 plus quantitative metrics using QuantStats including VaR at 95%, CVaR, max drawdown duration of 147 days versus Nifty 50 at 201 days, rolling volatility charts, monthly return heatmap and individual stock attribution to the total alpha generated.
- Demonstrated that structured stock selection through research and conviction consistently outperforms index investment when measured across risk adjusted return frameworks over a full market cycle.

Backtesting and Strategy Optimisation · Algorithmic Research

- Designed a systematic backtesting framework in Python using Backtrader and QuantStats to test and compare momentum and mean reversion strategies on NSE equity price data.
- Applied framework to Siemens India 2024 price data with full parameter optimisation. The optimised strategy produced a +50.5% return, Sharpe ratio of 1.557, 100% win rate and held one position across 84 days from entry at Rs 4380 to exit at Rs 6727.
- Implemented walk forward validation to test out of sample performance and prevent overfitting. Documented all three filter conditions including SMA crossover logic, 200 DMA trend filter and RSI overbought avoidance with full trade attribution.

BEYOND WORK

- ▶ Football coach and player at inter university level representing GTU
- ▶ Self taught market analyst since school, watching markets with family

AutoAgents · MTech Dissertation at DAIICT

- ▶ Developed a multi agent AI system as the MTech final year dissertation. Designed autonomous agents that coordinate tasks, share memory state and make sequential decisions across dynamic environments.
- ▶ Applied transformer based architectures and reinforcement learning techniques. Explored real world applications in financial data processing pipelines and automated research workflows at scale.

WHY THIS PROFILE IS DIFFERENT

Markets were never a classroom subject. Growing up watching my father track charts every morning, I taught myself technical analysis before I understood calculus. That obsession became a career path. I cleared NISM Series XV because I take this craft seriously. I build DCF models because price targets without a model are just opinions. I backtest strategies because discipline before a trade separates investors from gamblers. My MTech in CS is not a detour from finance. It is the reason I can do things in this field that pure finance graduates simply cannot.

TARGET ROLES

Junior Research Analyst · Quantitative Analyst · Equity Research Associate · Fintech Data Analyst · Financial Analyst

Based in Ahmedabad and Gandhinagar. Open to Mumbai, Bangalore and fully remote positions. Available for immediate joining.
